DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koyanagi et al (JP 2002-338652 in view of its English language machine translation).

Koyanagi et al disclose a photosensitive resin comprising a solvent [0014], a crosslinking compound, and initiator, and the urethane formed from components (a, b, and c, of which multiple may be employed) meeting the instant claim limitations [0009]-[0014], [0020]-[0025]. Suitable crosslinkers include poly glycidal ethers, propylene glycol (meth)acrylates, caprolactones, butanediol methacrylates, dicyclopentadienes, and compounds that are also vinyl monomers (i.e. hydroxyethyl (meth)acrylate). Initiators to be added include aceto and benzo phenone compounds as well as benzoin. The resultant resin solution may be employed in a variety of applications, one of which is coating of a wiring board, baking, exposing to UV through a negative photomask, developing, then post-baking the layer.

It would have been obvious to one of ordinary skill in the art to prepare the material of the reference choosing to employ the components as instantly claimed for preparing a polyurethane compound in a method as instantly claimed given the teachings of the reference.
